

Electronic Data Interchange Working Group

EIC: Area codes analysis

Version 2.0
30 June 2017

ENTSO-E Secretariat

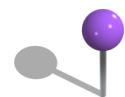

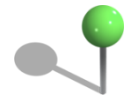

- The present analysis has been undertaken in collaboration with the European Electricity TSOs.
- The presentation illustrates Area-codes (Y-Codes) representing member state, synchronized areas, control blocks, control areas, market balance areas and scheduling areas which are currently or in future in use within the European markets.
- The presentation does not display Y-Codes which are currently used in the ENTSO-E RGCE (regional group continental Europe) settlement and accounting process.
- This list of Y-Codes can be subject to further updates in the future, e.g. depending on changes in area structures at national level.

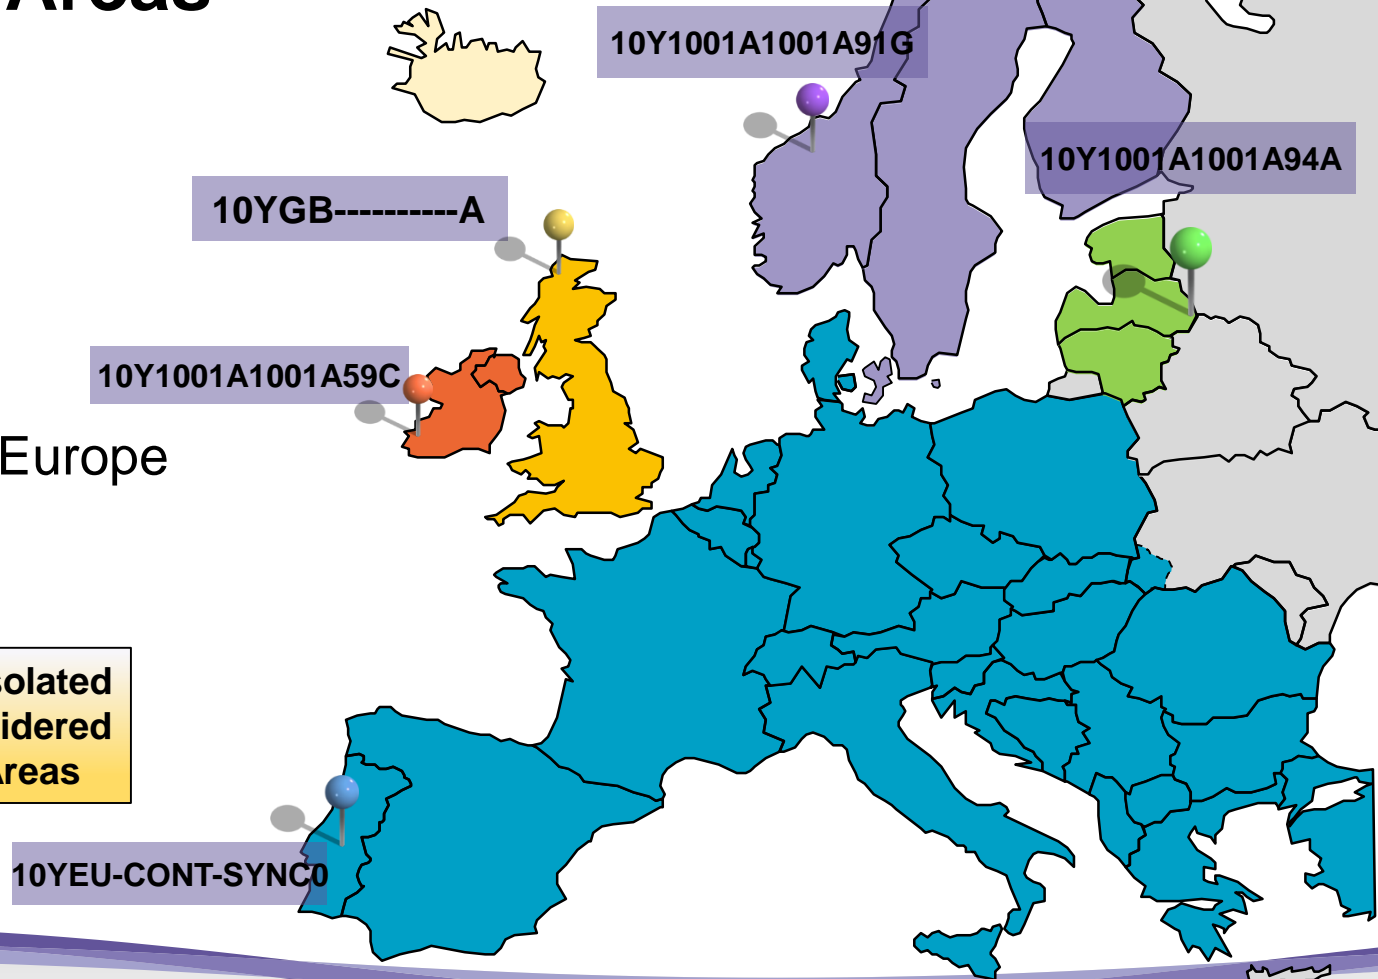

- **Synchronous Area:** *Synchronous Area means an area covered by interconnected Transmission System Operators (TSOs) with a common System Frequency in a steady state*
- **Control Block:** *The composition of one or more Control Areas, working together to ensure the load frequency control on behalf of RGCE.*
- **Control Area:** *A coherent part of the interconnected system, operated by a single system operator and shall include connected physical loads and/or generation units if any.*
- **Bidding Zone:** *Bidding Zone means the largest geographical area within which Market Participants are able to exchange energy without Capacity Allocation.*
- **Scheduling Area:** *The Bidding Zone except if there is more than one Responsibility Area within this Bidding Zone. In the latter case, the Scheduling Area equals Responsibility Area or a group of Responsibility Areas.*
- **Market Balance Area:** *A geographic area consisting of one or more Metering Grid Areas with common market rules for which the settlement responsible party carries out a balance settlement and which has the same price for imbalance. A Market Balance Area may also be defined due to bottlenecks.*

Synchronous area zones

Synchronous Areas

-  GB
-  Nordic
-  Baltic
-  Continental Europe
-  Ireland

****Iceland and Cyprus are isolated systems currently not considered as separate Synchronous Areas**

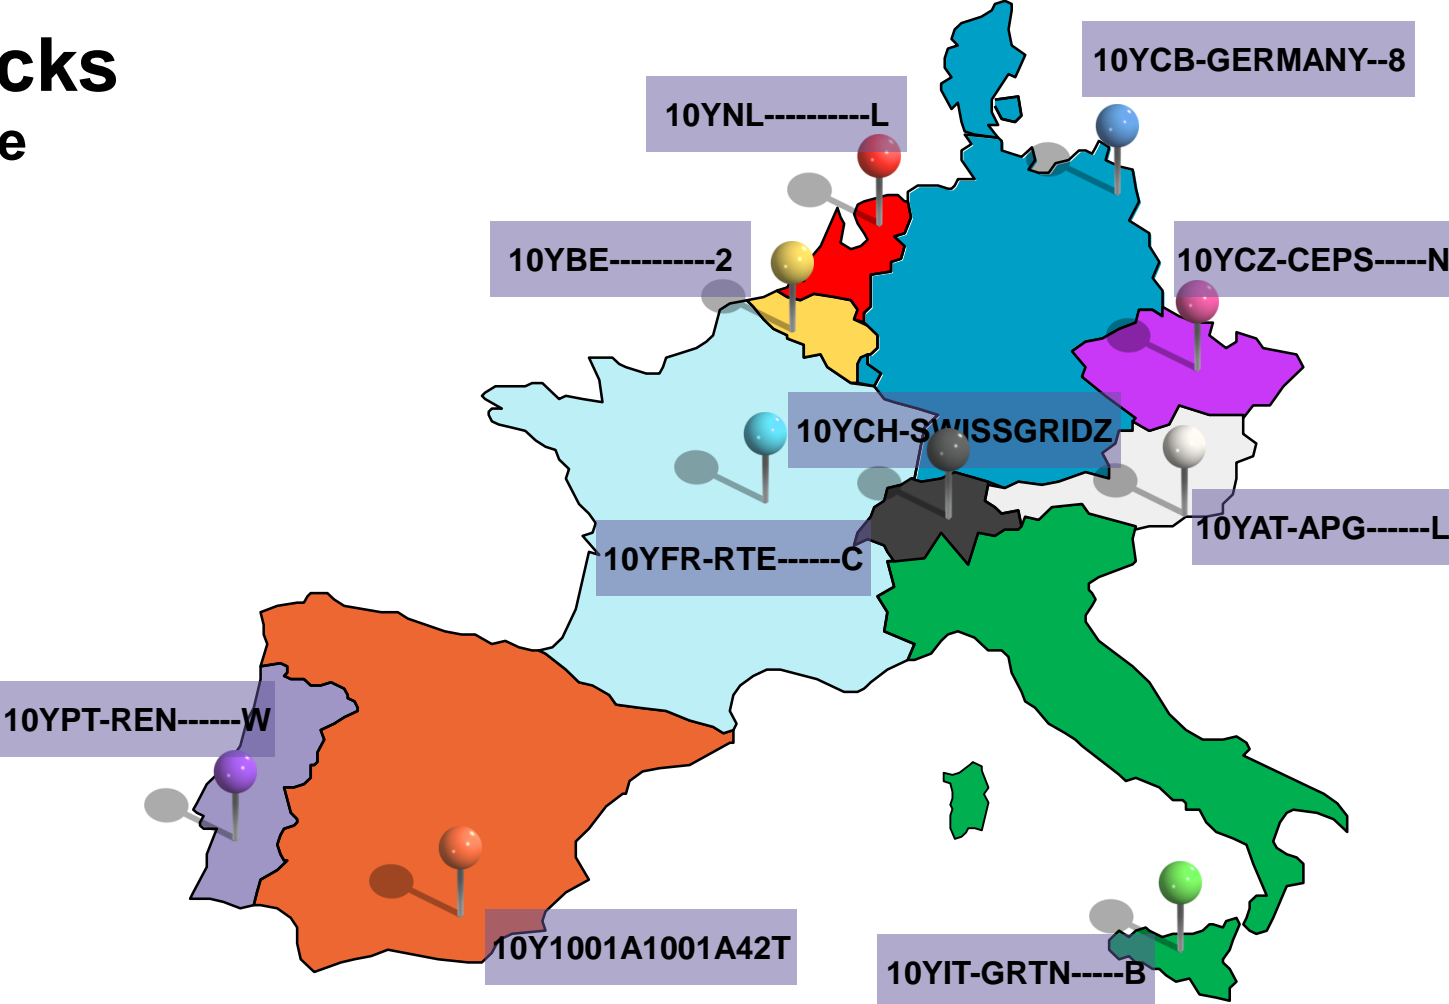

Control Blocks (Limited to Continental Europe)
